Tutoring Website

Landing page(s)

① ② ③

Login → student → student dashboard
- upcoming lessons on cal view?

Login → Tutor

Tutor Dashboard
- students + new bookings requests / notifications

Tabs:
- set subject & schedule
- Messages (later)
- Banking deets for payment
  └ direct deposit info

*this tab isn't super important b/c we are individually hiring so we can have them send it to us & I can manage payroll via stripe

Tabs:
- Book
- Message (later) or doc upload
- payment
  └ save a credit card which will be billed at beginning of lesson

subject ←
- based on subject they choose, they will have an assigned tutor & can book from their schedule

example

| Math | * | → | Bill | → | Bill's availability (calendly) |

| Sci |
↓
| Shonda |
↓
Shonda's avail (calendly)

or billed / pre-paid at time of booking OR billed after lesson?

Calendly generates zoom link & adds it as a meeting in both tutor & student's dashboard
*zoom always recorded & uploaded to cloud

* also! to consider → should we have a private tutoring company where we hire ppl & run it like that OR like those online businesses where anyone can sign up as a tutor or student w/o us authorizing them.
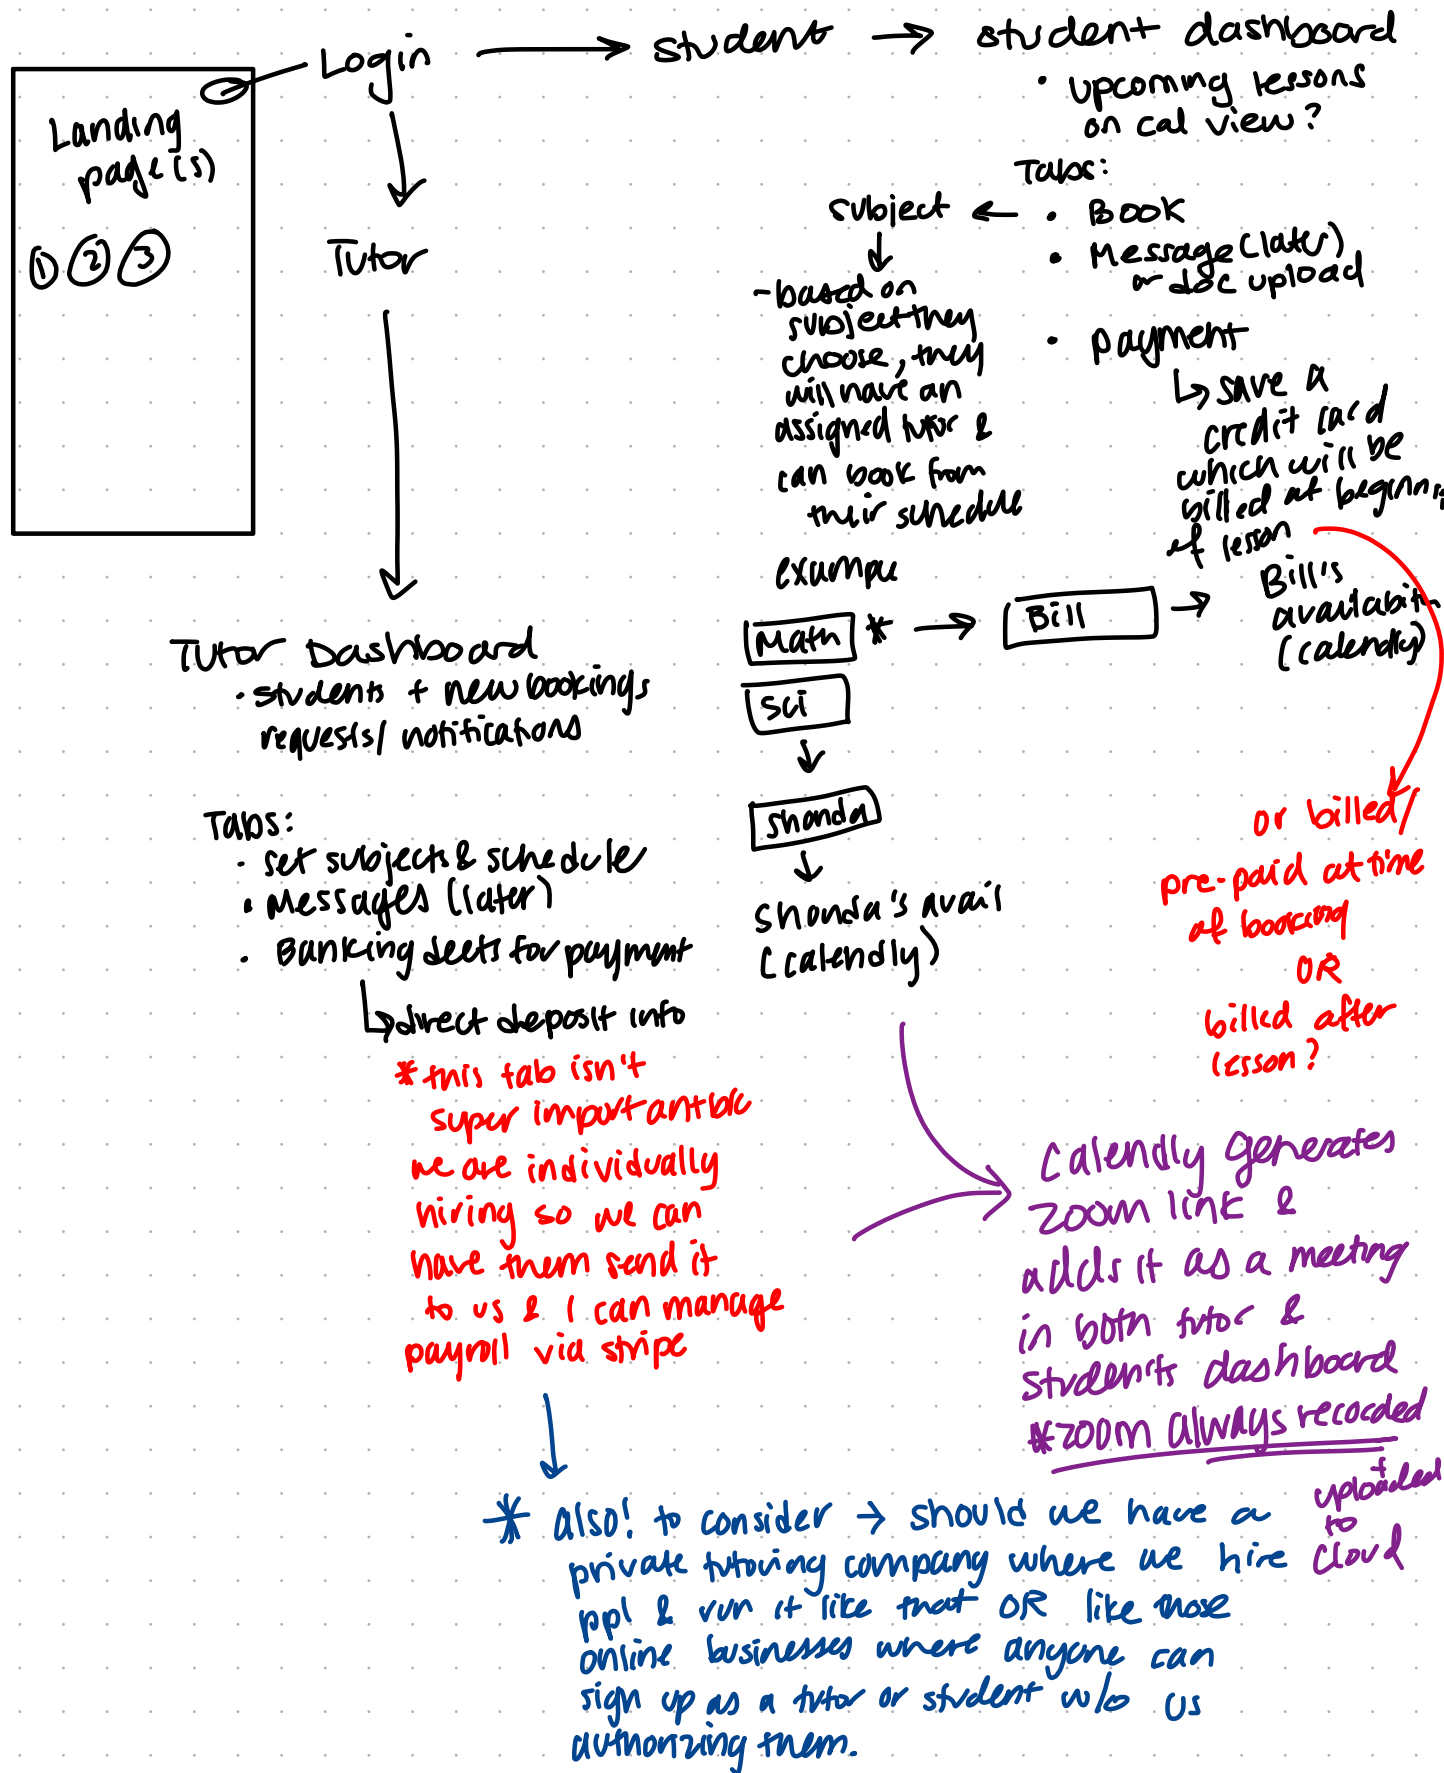

Additional Task → Think of website / company Name
